

## KIDD Trigger Weight Tuning Kit Installation

Use the trigger weight tuning springs to set/tune the pull weight of KIDD “Trigger Job” Kit in the factory poly trigger unit. These springs affect both the pull weight and reset of the trigger. A strong spring may be necessary if your trigger is not resetting consistently. With the KIDD “Trigger job” Kit installed in the factory polymer trigger guard the gray (no color) spring will set the trigger pull weight to approximately 1  $\frac{3}{4}$  lb., white 2  $\frac{1}{4}$  lb., red 2  $\frac{3}{4}$  lb., green 3  $\frac{1}{4}$  lb., blue 3  $\frac{3}{4}$  lb. Please keep in mind that these results are approximate since we do not manufacture the polymer trigger guard and slight variations can create large differences. (See “Trigger job” Kit instructions for assembly assistance.)
